

Case Study

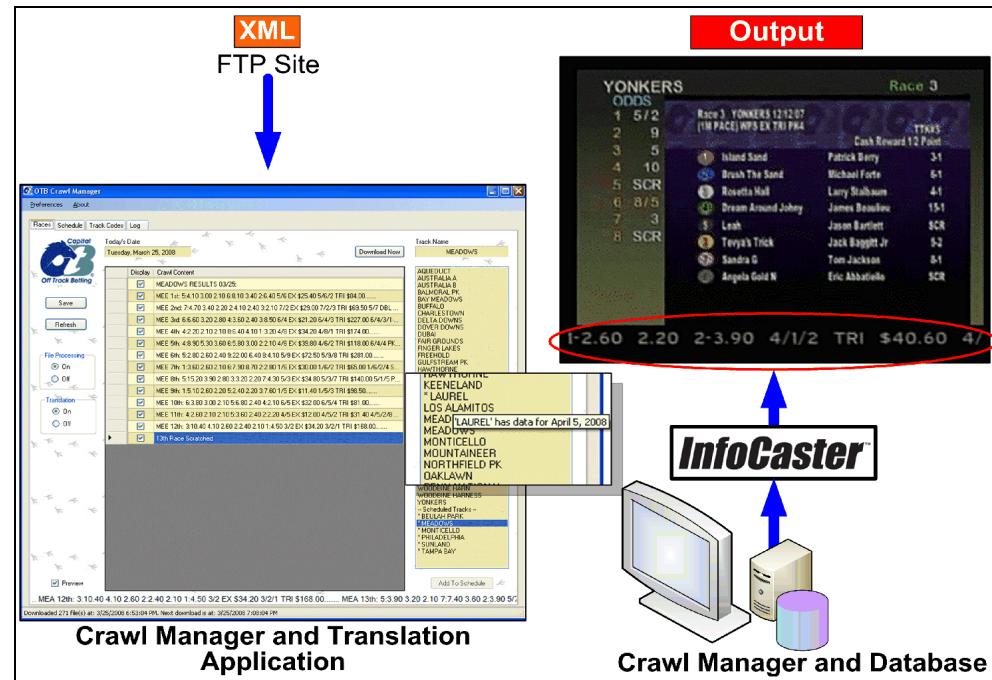

Crawl Manager - Advanced XML File Parser and Translator for Infocaster

Customer: Capital OTB
Application: Crawl Manager
Solution: Advanced XML File Parser and Translator for Infocaster.
Platform: Harris/Inscriber Infocaster

Capital OTB required an advanced data management solution to parse, translate and manage XML racetrack data for use as a crawl in Infocaster.

- XML Crawl Manager application connects to FTP every 15 minutes and retrieves available races.
- Crawl Manager automatically flags and identifies available Races with an asterisk.
- Each scheduled race is given a start and end time.
- Track abbreviations are translated and written to the database track table.
- An open text field allows the operator to enter any last minute information about racetrack conditions and race scratches.
- Infocaster Players connect to Crawl Manager database track/crawl table and display selected race results.
- Crawl Manager automatically runs a daily purge of race data older than 4 days.
